

Introduction

The main functionality of our web application is to provide information about TV and Cinema titles

Users can search for titles to be presented with information on the requested title, for example: release date, end date (if a TV series), runtime, rating, and genres.

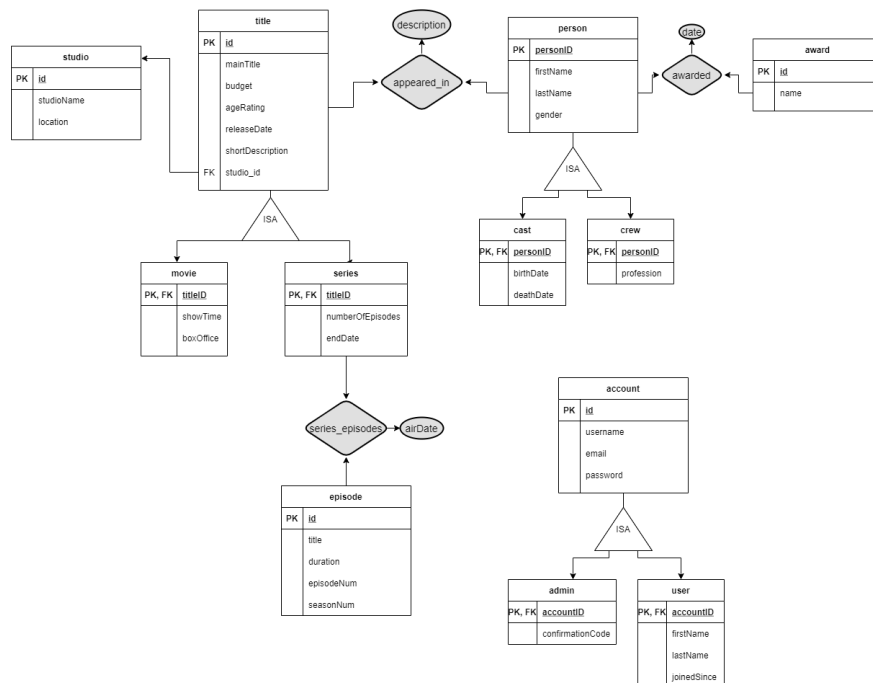

Users will also be able to create an account so they can rate movies, a site rating based on these ratings will also be shown for each title. Additionally, users will be able to display a list of movies and series that they have watched on their profile.

Note for the future: If possible we will add a social side to the web app, adding friends, and follow actors, directors, etc.

Following is the list of ways a user can interact with our web app (Database):

- Search the database for titles (Movies/TV Series), actors and other key data to receive relevant information.
- Create an account on the website and log in.
- Rate movies and write reviews.
- Mark movies as ‘watched’ which adds them to their profile page.

ER Diagram

- the Person table refers to any working cast/crew member on the title.
- the User table refers to the registered users on the website.
